Shenghao Zheng

zhengshenghao666@gmail.com — +86 13298119850 — Research Gate — Google Scholar
Personal Academic Website: Zheng Shenghao

RESEARCH INTERESTS

Computational imaging, Miniaturized device design, Computer Vision
Deep learning methods and it's applications in solving inverse imaging problems.

EDUCATION

Harbin Institute of Technology, Harbin, China — Sept. 2022 — Jun. 2024
Master of Engineering in School of Instrumentation of Science and Engineering — Cumulative GPA: 85.8/100

Harbin Institute of Technology, Harbin, China — Aug. 2018 — Jun. 2022
Bachelor of Engineering in School of Instrumentation of Science and Engineering — Cumulative GPA: 88.95/100
Ranking: 4/53 Percentage: 7.55%

RESEARCH EXPERIENCE

Lensless imaging method based on mask modulation June 2022 – June 2024

- Designed and set up the lensless masked imaging (LMI) system for data collection.
- Proposed a self-calibrated phase retrieval (SCPR) method that can jointly retrieve the binary amplitude mask and the complex wave field of a sample.
- Introduced the idea of wavefront decoupling into LMI systems, which was commonly used in ptychographic iterative engine (PIE) imaging systems.
- Proposed an enhanced self-calibrated phase retrieval (eSCPR) method that can realize single-shot, dynamic LMI.

Dual-constrained physics-enhanced untrained neural network for lensless imaging June 2022 - October 2023

- Constructed the basic workflow of the self-supervised untrained DPENet with Mr. Zehua Wang.
- Set up the lensless imaging system and assisted in completing the data collection work.
- Assisted in replying to reviews' comments.

Lensfree auto-focusing imaging with coarse-to-fine tuning method June 2022 – June 2024

- Constructed the basic backbone of the sFocusNet with Mr. Zhihui Ding.
- Set up the experimental system and assisted in completing the data collection work.
- Assisted in replying to reviews' comments.

Lensfree brick-assembled microscopy based on prior-guided phase retrieval (on preparing) March 2024–Present

- Designed a brick-assembled lensfree microscopy, providing a toy-based microscopic platform for preschool education.
- Proposed a prior-guided phase retrieval algorithm that can reconstruct the complex wavefield of samples with high quality and low running time.

SELECTED COURSES

Master's Courses

- Nonlinear optics — Grade: 90/100
- Numerical Analysis B — Grade: 93/100

Bachelor's Courses

- Linear Algebra and Analytic Geometry B — Grade: 98/100
- Calculus B(1) — Grade: 95/100
- Calculus B(2) — Grade: 95/100
- Complex Function and Integral Transformation — Grade: 94/100
- Engineering Optics (1) — Grade: 91.3/100
- Engineering Optics (2) — Grade: 93.5/100
- Electromagnetic Fields — Grade: 95.1/100

AWARDS

The 16th National Smart Car Competition — China
First prize in the North division — 2021

The 9th National University Students' Opt-Sci-Tech Competition — China
Second prize — 2021

The 10th National University Students' Opt-Sci-Tech Competition — China
Second prize in the North-East division — 2022

The 11th National University Students' Opt-Sci-Tech Competition — China
Second prize in the North-East division — 2023

TI Cup Heilongjiang Province Graduate Electronics Design Contest — China, Heilongjiang
Second prize — 2020.11

Outstanding graduate student — China, Harbin Institute of Technology, 2022.

SELECTED PROFESSIONAL SKILLS AND PERSONAL INTERESTS

Experiment Skills: Construct different kinds of lensless imaging systems including lensless on-chip imaging systems, lensless masked imaging systems, PIE imaging systems et al. Perform the experimental system to achieve the expected results.

Programming Skills:

- **Matlab** (Proficient): Use programming language to reproduce physical processes. Build up mathematical models for the imaging system (LMI, lensless on-chip imaging system, PIE et al). Establish the inverse problem and solve the problem with numerical methods.

- **Python** (Proficient): Construct various kinds of neural network models using Pytorch package. Perform supervised and self-supervised training. Call the pre-trained networks in matlab. Combine the advantages of the two programming languages (Python, Matlab) to solve the image inverse problems.

- **SolidWorks** (Proficient): Design 3-D printed adapters and connectors. Opto-mechanical system design and process.

Personal Interests: Skiing and Snowboarding (skillful in snowboarding) — Badminton — Swimming
